

# Products to Delay an Active Shooter

Compiled by Sherry Colgan Stone, Ed.D.

This list was created to demonstrate options. The list is not an endorsement of these products, but rather an awareness document.

## QWICKLOCK

[http://www.qwicklock.com/product\\_info.html](http://www.qwicklock.com/product_info.html)

The Hydra-Lock was designed for fast and simple application in any situation where security is a concern. Its universal design allows for its usage on a large variety of doors equipped with hydraulic door returns. If the Hydra-Lock buckle is tightened ahead of time to custom fit the device to your door, it can be applied in seconds as seen in the photos.

When the Hydra-Lock is in place, the opening of the door is restricted to a range of 2-10 inches making it impossible for average sized individuals to get through. The durable construction of polypropylene is tested to hold over 4,000 lbs and is resistant to UV, moisture, or chemical exposure.

## LOCK BLØCK

<http://doorblok.com/lockblok.html>

Allows for “quick locking.” This device is used for doors that are kept locked, but the occupants still want individuals to be able to come and go through a semi-closed door during day-to-day operations. The door rests on the rubber slide during the day. During an active shooter when the device slide is moved, the door closes and the lock engages.

There are two adhesive strips on the back side of the housing. The housing--attached to the side of the door that comes in contact with the latch--traps the rubber slide but allows it to move side-to-side. The slide prevents the door from being able to close completely.

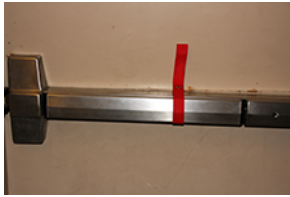

By moving the slide away from the edge of the door, the door will close completely and engage the latch

## PANIC BAR STRAPS

<http://www.lockdownmagnets.com/panicbarstraps.htm>

### How to install:

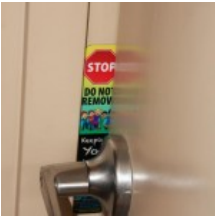

- 1) Lock panic bar exterior trim
- 2) Attach PANIC BAR STRAP around panic bar with the stainless steel snap (assembly required)

### When the lockdown procedure is called:

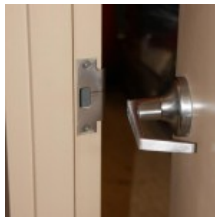

- 1) PULL LOOP ON PANIC BAR STRAP TO RELEASE
- 2) Door is now locked & secured

## LOCKDOWN MAGNETS

### How to install:

- 1) Put door into the locked position
- 2) Place LOCKDOWN MAGNET™ over strike plate \*
- 3) Close Door \*\*

### When the lockdown procedure is called:

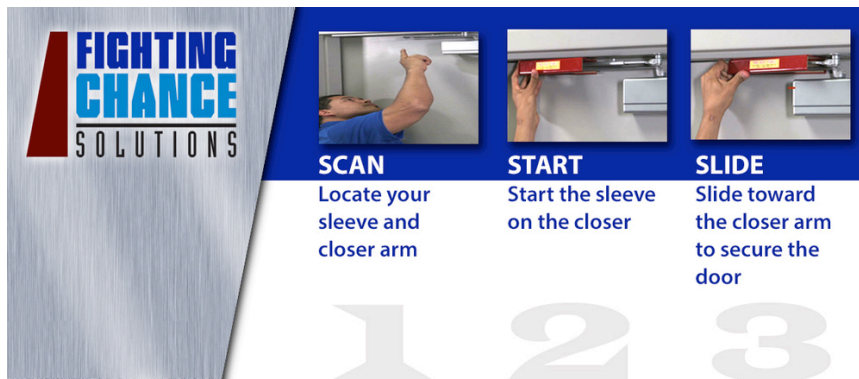

- 1) Open door a few inches
- 2) Remove LOCKDOWN MAGNET™
- 3) Close Door

\* Some doors may need to be adjusted to fit magnet between door and frame

\*\* Will only work on steel frames

## FIGHTING CHANCE SOLUTIONS

<http://www.fightingchancesolutions.com/>

The Sleeve offers your classroom or business a multitude of benefits in situations where time is short and ramifications deadly:

- 1) Incredibly fast application:* The main advantage of The Sleeve is that it can be safely applied quickly. This is extremely important when situations are developing fast or there are multiple doors to secure in a room. Being able to apply The Sleeve quickly makes sense, but just as important, may be being able to remove it quickly when a swift evacuation is necessary.
- 2) No key necessary:* Individuals such as: substitute teachers; building aids; students; or office workers seeking shelter and protection in a room during a dangerous situation can engage The Sleeve without a key. This also eliminates fumbling for, or trying to find, a key in a situation where seconds count and fine-motor skills are on the decline.
- 3) No Need to go into the hallway to lock a door:* The Sleeve works on doors that utilize a door closer. This allows the user to restrict entrance through a door without going into the hallway to lock the door with a key.
- 4) No installations or modifications to door are necessary:* The Sleeve is a cover that slides over the arms of a door closer. Most doors, especially those that are in compliance with the "Americans with Disabilities Act" or are rated as "fire barriers," will have an existing closer arm. Because the product exists independently of the door and any of its hardware, there are no modifications needed to a building's doors or structure; no drilling, cutting, or installation of new hardware to the door or building walls. This is especially important for doors that might be rated as "fire barriers" in which case, modifications are illegal.

# BARRACUDA INTRUDER DEFENSE SYSTEM

<http://www.bilco.com/Barracuda-Intruder-Defense-System.html>

The Barracuda Intruder Defense System was developed for both outward and inward swinging doors and can be deployed in a matter of seconds. These products are currently being utilized in his shooter response training programs and the positive reaction has been overwhelming.

## Benefits:

- The Barracuda Intruder Defense System Fast and easy; installs in a matter of seconds
- Securely locks an entry point in a lock-down situation.
- Free-standing device (not permanently attached to door)can be easily transferred to another access point
- No maintenance or installation costs required

The Barracuda Intruder Defense System is Less expensive than locksets and much more secure than small, inexpensive devices

## Model DSO For Outward Swinging Doors

## Model DSI for Inward Swinging Doors

## Features:

- Models available for inward swinging doors
- Designed for use on 36" wide commercial doors
- Heavy-duty steel construction
- Durable powder coat paint finish
- Lightweight for easy positioning
- Supplied with convenient wall-mounting rack

The DCS is designed to be used in conjunction with the DSI or DSO to provide an additional level of security. Due to the wide variety and inconsistency of door closers and their fasteners, it is not recommended to use the DCS as a standalone solution.

## Features:

- Models available for scissor action door closers
- Heavy-duty steel construction
- Durable powder coat paint finish
- Lightweight for easy positioning
- Supplied with convenient wall-mounting rack

## Devices not designed for Barricade or Lock – but may work for these situations

### NRS 1" HD TIE-DOWN STRAPS
